

Ward Off The Spread of Germs & Viruses With High-Output Germicidal UVC lamps

For best practices, the Center For Disease Control (CDC) recommends the following daily precautions for preventing the coronavirus disease (COVID-19) caused by the novel coronavirus. Please visit: <https://www.cdc.gov/coronavirus/2019-ncov/specific-groups/high-risk-complications.html> for more information.

In addition to standard daily hygiene practices suggested by the CDC, be proactive by adding our high-output UVC lamp to your HVAC system to purify the air, which will help improve overall indoor air quality and will reduce the likelihood of contracting any viruses.

Although we can't guarantee that someone will not become infected by a virus, a properly designed and installed UVC lamp, with enough microwatt intensity, will destroy airborne viruses that pass through the HVAC system.

- Our high-output germicidal UVC lamps kill or deactivate airborne viruses, bacteria, germs and other bioaerosols that travel through your HVAC system and recirculate throughout your home.
- Our germicidal UVC technology is used to prevent the spread of viruses and germs in hospitals and other healthcare facilities.

- Lifetime warranty on electronics, 2-year warranty on lamps
- 2-year long-life lamps

- Our high-output UVC lamps also sterilize airborne viruses, bacteria and germs as they pass by lamps, rendering them harmless and incapable of reproducing.
- Our high-output UVC lamps are **3.3 times more powerful** than standard lamps and will disinfect your air 24 hours a day naturally, without adding chemicals or sprays into your environment.
